

Assembly & Manufacturing

Utilize Simple Kitting, Assembly BOMs, or Production Orders | Turn Finished Goods Into Equipment Rental Stock, or Deploy to the Field to Support Various Field Services Operations

PARTIAL FEATURES LIST:

- Maintain an inventory database for parts, sub-assemblies, and finished goods.
- Efficiently manage bills of materials, lead times, and production orders.
- Assemble, fabricate, or manufacture items for sale or rental.
- Keep track of revisions to Bills of Materials.
- Track serial numbers of components as well as finished goods.
- Record replacement of parts and the date they were replaced.
- Planning tools recommend and automatically create and schedule purchase orders, transfer orders, and production orders based on demand or desired stock levels.
- Calculate available-to-promise and capable-to-promise availability during sales order entry.
- Proper handling of inventory, cost of sales, and work in progress.

- Create routing steps with labor and parts consumed at the beginning, at completion, or during any step of production.
- Use routing steps to track subcontracted work or treatment provided by a vendor.
- Backflush, forward flush or consume parts at any stage of production.

Requirements Often Needed

- If your manufacturing needs are fairly simple, or you're new to manufacturing software, you can implement in phases. Beginning with just the basics gives you immediate benefits

while simplifying the implementation process and creates less disruption to your business. You can define the critical manufacturing and reorder policies that MRP will use to calculate net requirements. The program suggests what to order based on fact vs. guesswork, offers complete visibility into how it came up with these suggestions, and offers the flexibility to adapt and adjust your manufacturing policies, on the fly, as your ever-changing business demands dictate.
